

Door and Setup Cut Summary Reports

The purpose of the report is to provide a condensed summary of common cut sizes for the build date selected. All logistics dashboard filters are available to be more selective. Only extrusions ('E-'), their cut length, and instructions are processed for summary. Summary minimum quantity is user defined.

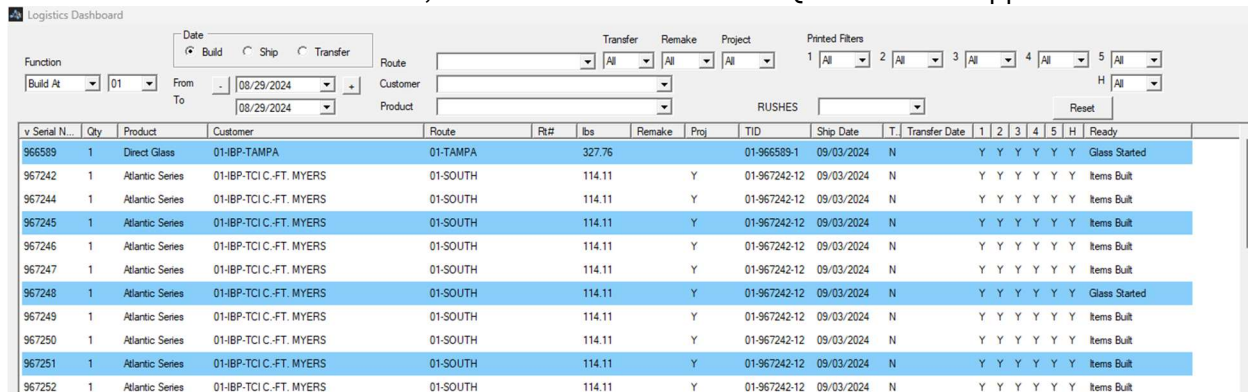

The basic concept:

- Choose the Build Location
- Select Date reference = Build
- Select the Date (range) to review

The contents of the Dashboard define the BOMs that will be reviewed and summarized

- As each order is reviewed, if the item has been built in QEP it will be skipped

There are two reports:

- Extrusion Door Cut List (Door Assemblies)
 - This is easily assumed Atlantic, Hybrid & Gulf
- Extrusion Setup Cut List (Setup Assemblies)
 - Filtering by product may be beneficial
- Summary Minimum Quantity for each saved by user

The results are grouped / sequenced by:

- Color, Part Number (new numeric version), Cut Length
